

LECTURE #15

Land Use Data Analysis in QGIS

OBJECTIVE

- EXPLORATORY CLASSIFICATION USING K-MEANS.

STEPS

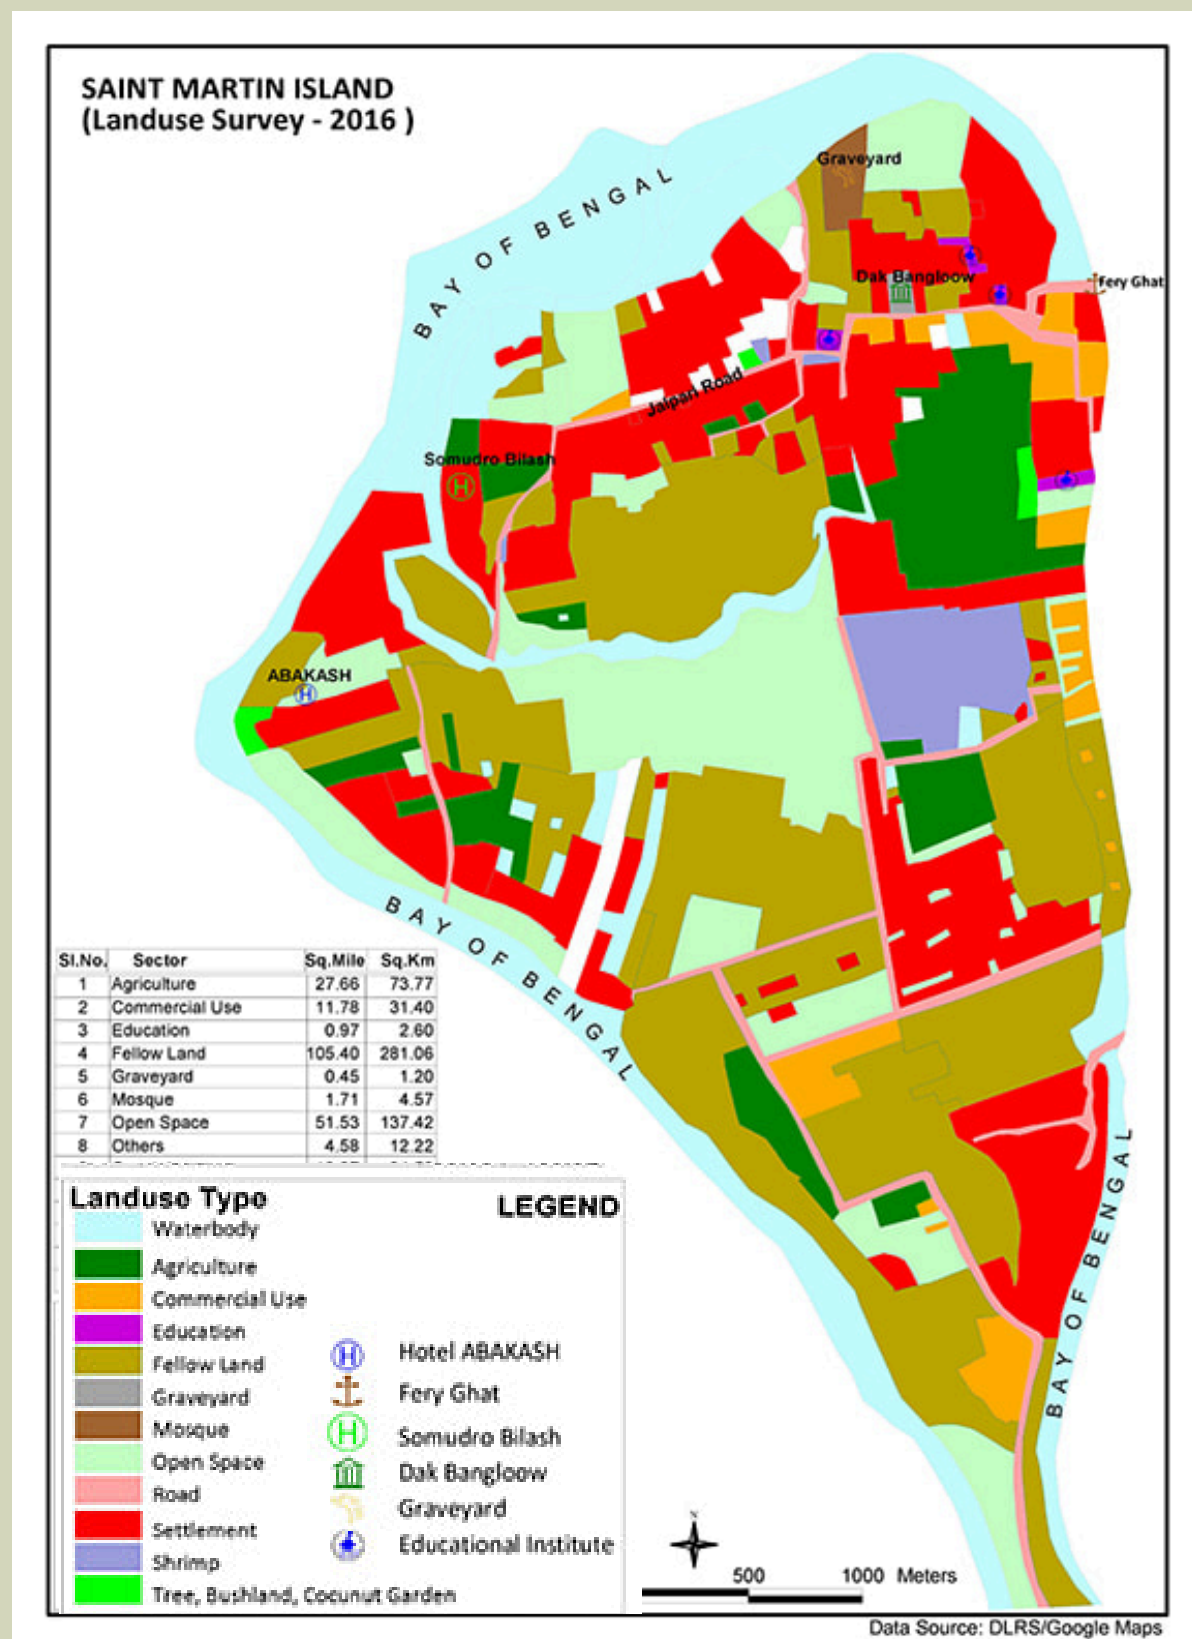

1. SUPERVISED X SEMI-AUTOMATIC CLASSIFICATION.
2. TYPES OF IMAGE CLASSIFICATION.
3. 4. UNSUPERVISED CLASSIFICATION WITH SCP PLUG-IN.

LAND USE DATA

A LAND USE SHAPEFILE IS USUALLY CREATED FROM SATELLITE IMAGE CLASSIFICATION, AND LATER REFINED USING TOPOGRAPHIC SURVEYS, CADASTRAL INFORMATION, OR OFFICIAL GOVERNMENT DATASETS. IT REPRESENTS HOW THE LAND IS BEING USED: RESIDENTIAL AREAS, COMMERCIAL ZONES, INDUSTRIAL SITES, GREEN SPACES, FORESTS, AGRICULTURE, AND SO ON.

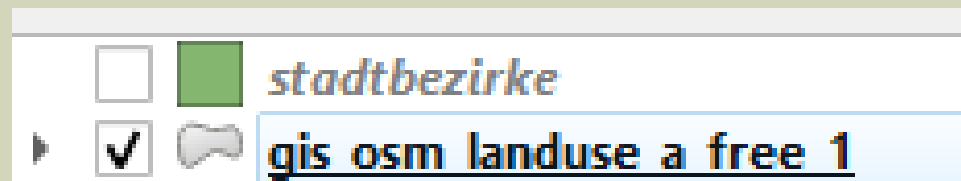

2) WHY LAND USE DATA IS IMPORTANT

IT IS IMPORTANT FOR URBAN PLANNING, ENVIRONMENTAL MANAGEMENT, AND DECISION-MAKING. IT HELPS CITIES UNDERSTAND HOW SPACE IS ORGANIZED (WHERE GREEN AREAS ARE LACKING, AND HOW URBAN EXPANSION IS HAPPENING...). WHEN COMBINED WITH ADMINISTRATIVE UNITS SUCH AS NEIGHBORHOODS, WE CAN DESCRIBE SPATIAL PATTERNS AND COMPARE SOCIO-ENVIRONMENTAL DIFFERENCES WITHIN THE CITY.

LET'S ANALYSE FREIBURG'S LAND USE BY NEIGHBORHOOD

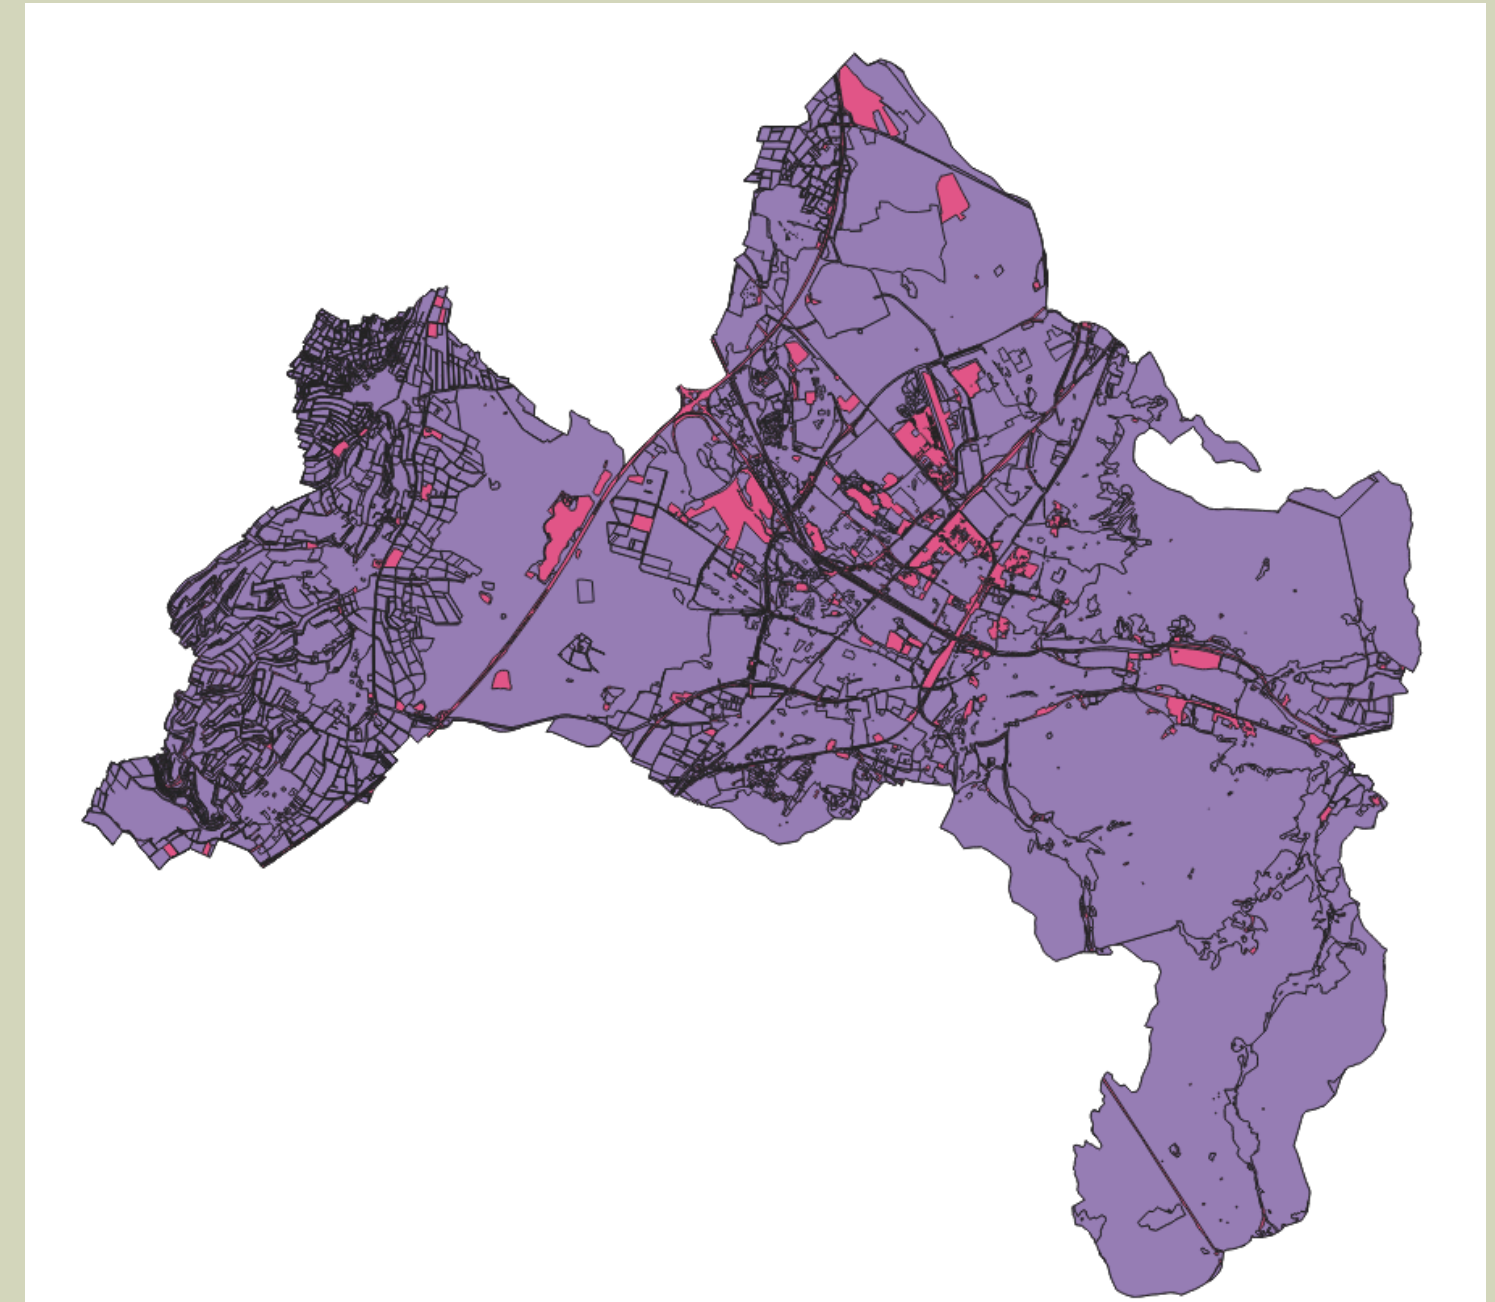

ADD LAYERS:

LAND USE FROM THIS DATASET:
FREIBURG-REGBEZ-251026-FREE.SHP

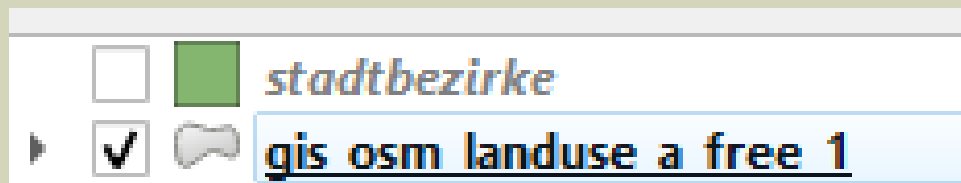

CLIP LAND USE SHAPEFILE TO FREIBURG'S BORDER.

- REMEMBER TO KEEP BOTH LAYERS IN THE SAME COORDINATE SYSTEM BEFORE CLIPPING.

LET'S ANALYSE FREIBURG'S LAND USE BY NEIGHBORHOOD

ADD LAYERS:

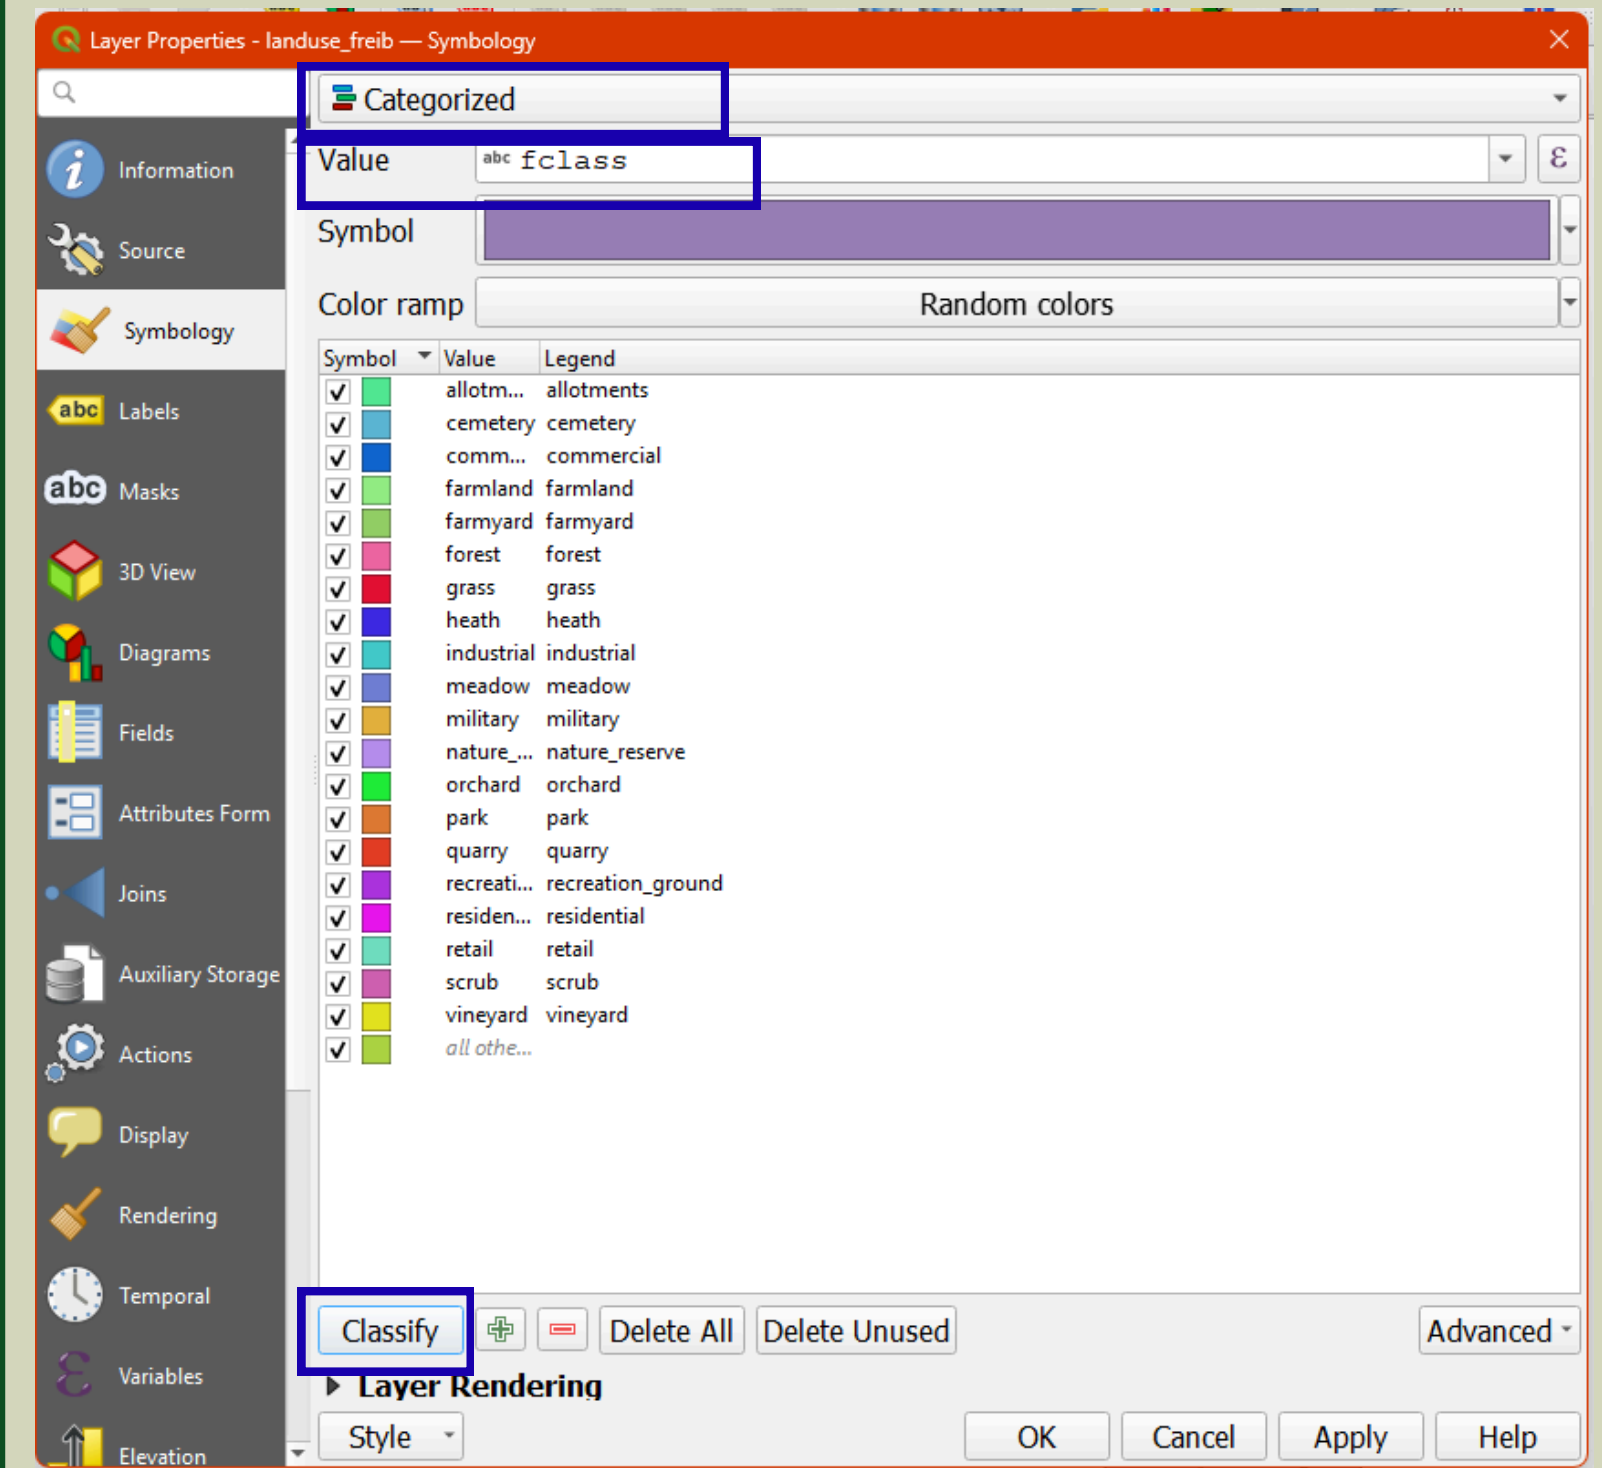

LAND USE FROM THIS DATASET:
FREIBURG-REGBEZ-251026-FREE.SHP

CLIP LAND USE SHAPEFILE TO FREIBURG'S BORDER.

- REMEMBER TO KEEP BOTH LAYERS IN THE SAME COORDINATE SYSTEM BEFORE CLIPPING.

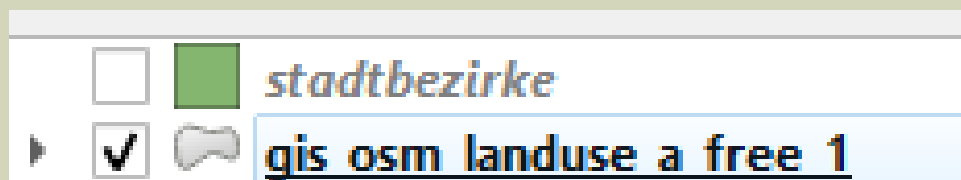

IN THE LAYER'S PROPERTIES, YOU CAN CHANGE THE SYMBOLOGY TO "CATEGORIZED" TO COLOUR THE LAND USE CLASSES.

- VALUE: FCLASS
- CLICK 'CLASSIFY' TO CREATE SEE THE LIST.

LET'S ANALYSE FREIBURG'S LAND USE BY NEIGHBORHOOD

ADD LAYERS:

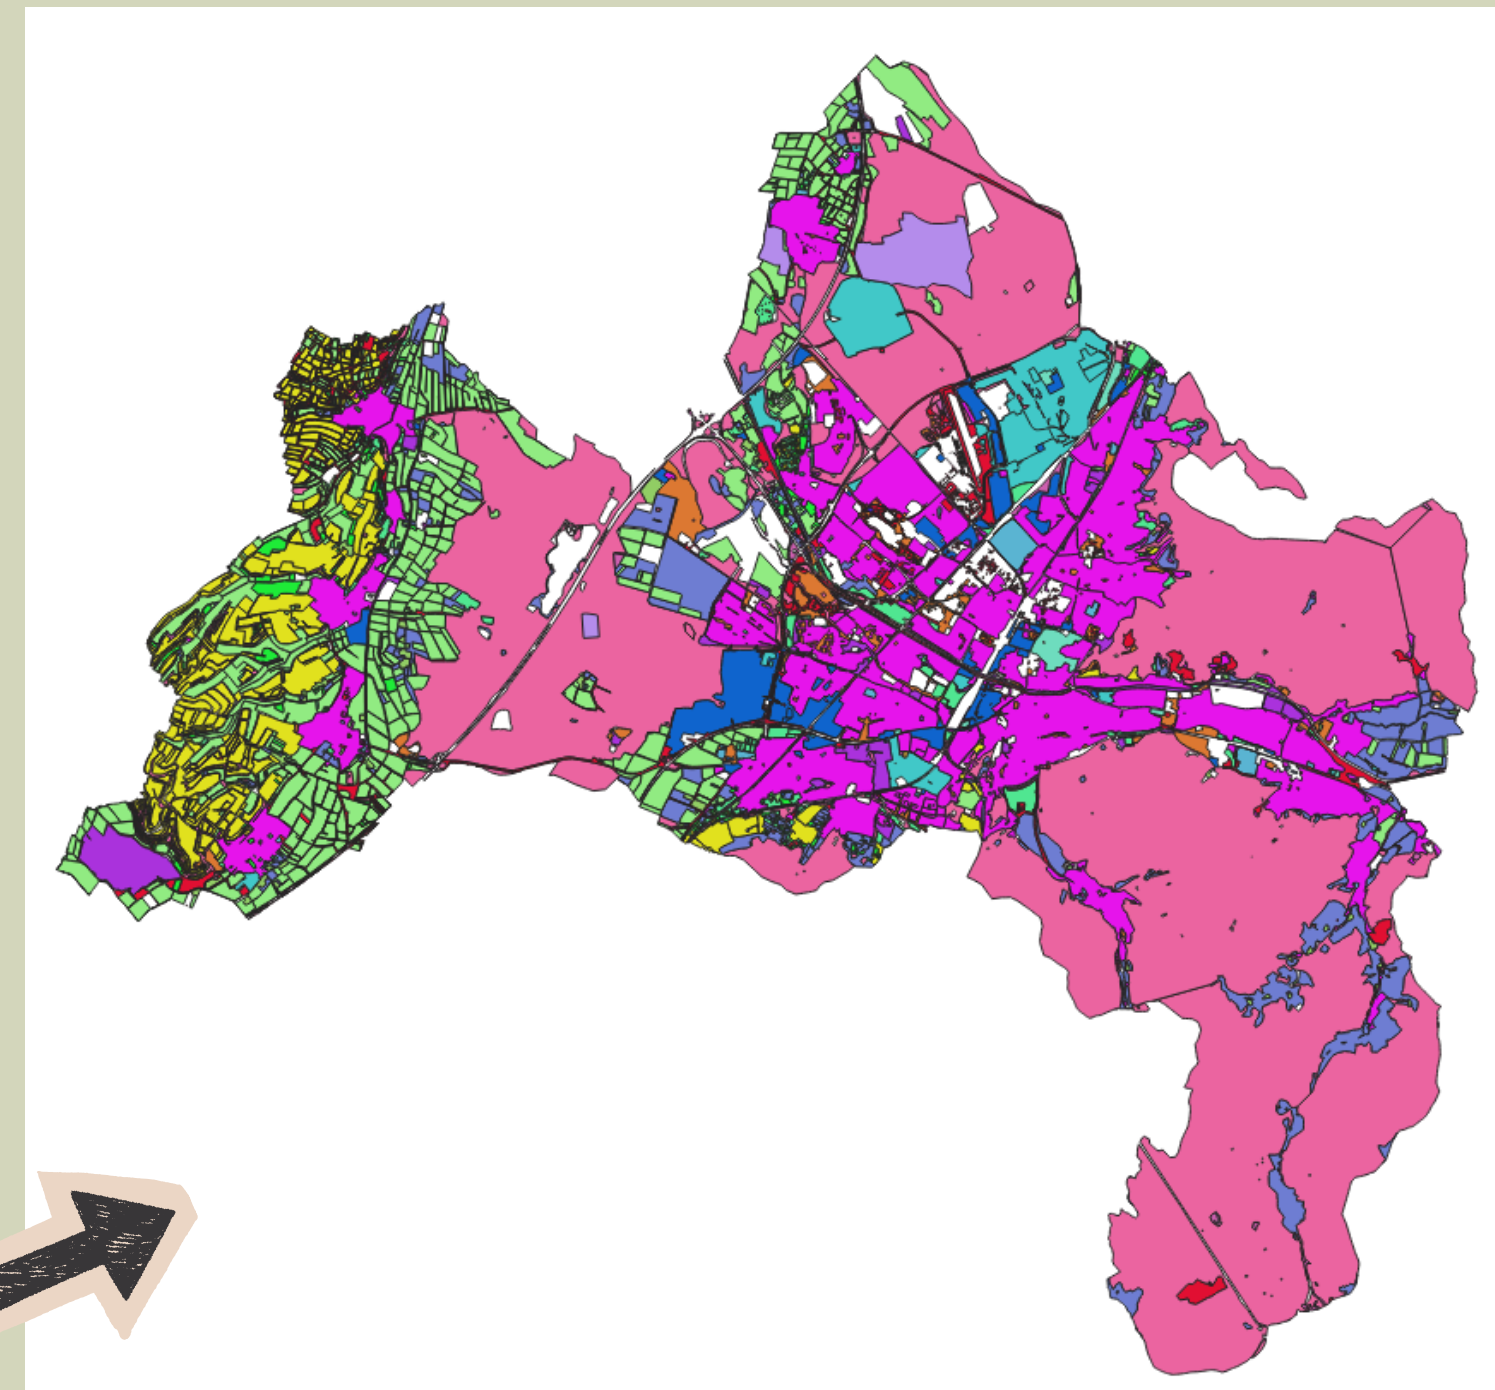

LAND USE FROM THIS DATASET:
FREIBURG-REGBEZ-251026-FREE.SHP

CLIP LAND USE SHAPEFILE TO FREIBURG'S BORDER.

- REMEMBER TO KEEP BOTH LAYERS IN THE SAME COORDINATE SYSTEM BEFORE CLIPPING.

IN THE LAYER'S PROPERTIES, YOU CAN CHANGE THE SYMBOLOGY TO "CATEGORIZED" TO COLOUR THE LAND USE CLASSES.

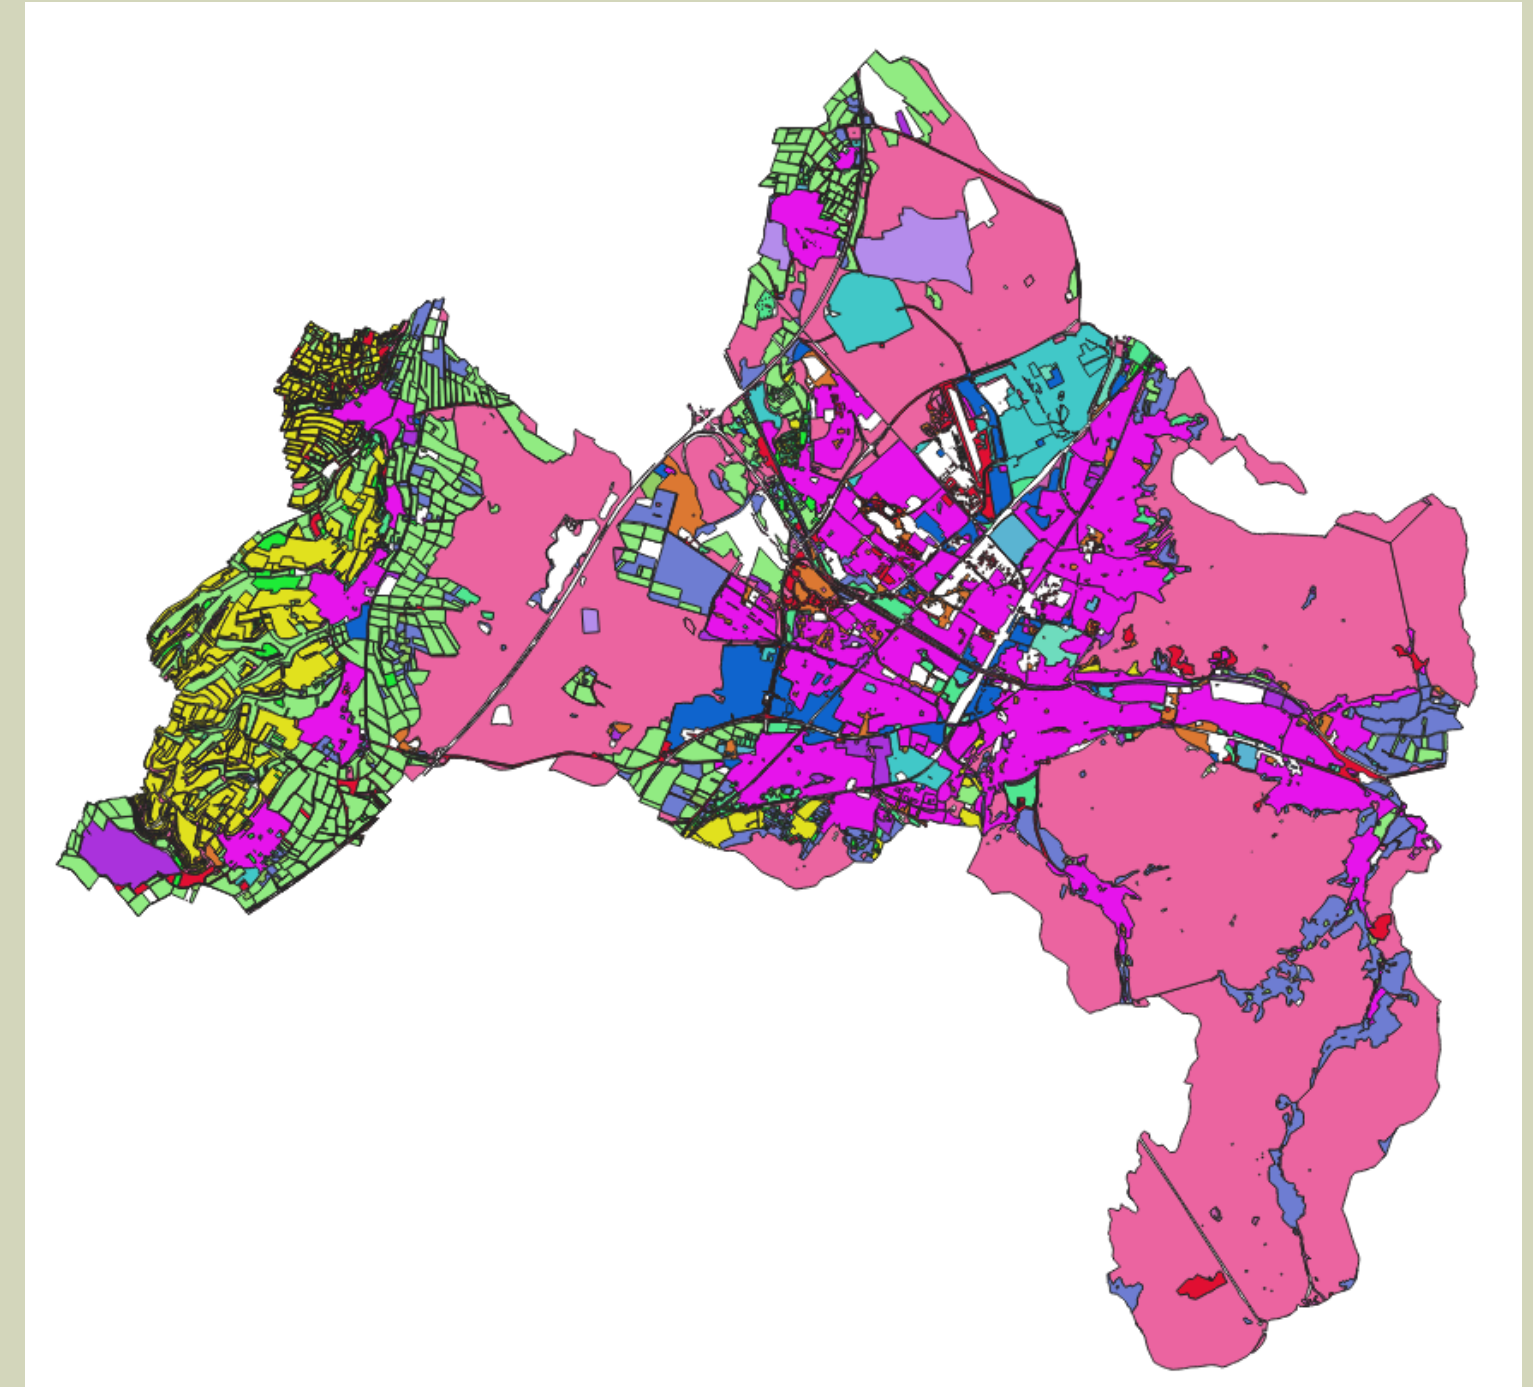

- VALUE: FCLASS
- CLICK 'CLASSIFY' TO CREATE SEE THE LIST.

LET'S ANALYSE FREIBURG'S LAND USE BY NEIGHBORHOOD

SOME SPATIAL QUESTIONS:

- 1) WHAT IS THE MOST FREQUENT LANDUSE IN FREIBURG?
- 2) WHICH NEIGHBORHOOD HAS THE LARGEST RESIDENTIAL AREA?
- 3) WHICH NEIGHBORHOODS HAVE THE HIGHEST AMOUNT OF GREEN AND NATURAL LAND USE?
- 4) WHERE ARE COMMERCIAL AND RETAIL AREAS CONCENTRATED?
- 5) WHICH NEIGHBORHOODS HAVE THE HIGHEST LAND USE DIVERSITY?
- 6) WHICH NEIGHBORHOODS HAVE THE HIGHEST NUMBER OF PARKS AND SOCIAL GREEN SPACES?

Q1: What is the most frequent landuse in Freiburg?

06

1) GO TO:

PROCESSING TOOLBOX → VECTOR ANALYSIS → BASIC STATISTICS FOR FIELDS

INPUT LAYER: LANDUSE

FIELD TO CALCULATE STATISTICS ON: FCLASS

RUN

2) OPEN THE OUTPUT'S ATTRIBUTE TABLE.

Statistics — Features Total: 1, Filtered: 1, Selected: 0

	count	unique	empty	filled	min	max	min_length	max_length	mean_length	minority	majority
1	5219	20	0	5219	allotments	vineyard	4	17	6,74190457942...	military	grass

Q2: Which neighborhood has the largest residential area?

07

1) INTERSECT NEIGHBORHOODS WITH THE LAND USE LAYER

QGIS → VECTOR → GEOPROCESSING TOOLS → INTERSECTION

IT GIVES YOU ONLY THE PARTS OF LAND USE INSIDE EACH NEIGHBORHOOD.

INPUT LAYER: NEIGHBORHOODS

OVERLAY LAYER: LAND USE

RUN

YOU WILL GET A NEW LAYER WHERE EACH POLYGON HAS:

THE NEIGHBORHOOD ID/NAME

THE LAND USE CLASS (E.G., RESIDENTIAL)

LAND USE GEOMETRY IS CLIPPED TO THE NEIGHBORHOOD BOUNDARY.

2) CALCULATE THE AREA OF EACH PIECE OF LAND USE

ADD AN AREA FIELD:

ATTRIBUTE TABLE → FIELD CALCULATOR → CREATE NEW FIELD

FIELD NAME: AREA_HA

EXPRESSION: \$AREA / 10000

OUTPUT: DECIMAL NUMBER

NOW EACH POLYGON (EACH LAND USE FRAGMENT) HAS ITS AREA IN HECTARES.

Q2: Which neighborhood has the largest residential area?

3) FILTER THE LAYER TO RESIDENTIAL ONLY.

RIGHT BUTTON ON THE LAYER → FILTER →
EXPRESSION: "FCLASS" LIKE 'RESIDENTIAL'

4) SUMMARIZE RESIDENTIAL AREA BY NEIGHBORHOOD

VECTOR → ANALYSIS TOOLS → STATISTICS BY CATEGORIES

CATEGORIZED BY: NEIGHBORHOOD NAME

FIELD TO CALCULATE SUM: AREA_HA

THE NEIGHBORHOOD WITH THE HIGHEST SUM IS THE
ANSWER.

Statistics by category — Features Total: 42, Filtered: 42, Selected: 0

	name	count	unique	min	max	range	sum	mean
1	St. Georgen-No...	4	4	0,24	129,364	129,124	131,133	32,78

Show All Features

Q3: Which neighborhoods have the highest amount of green and natural land us?

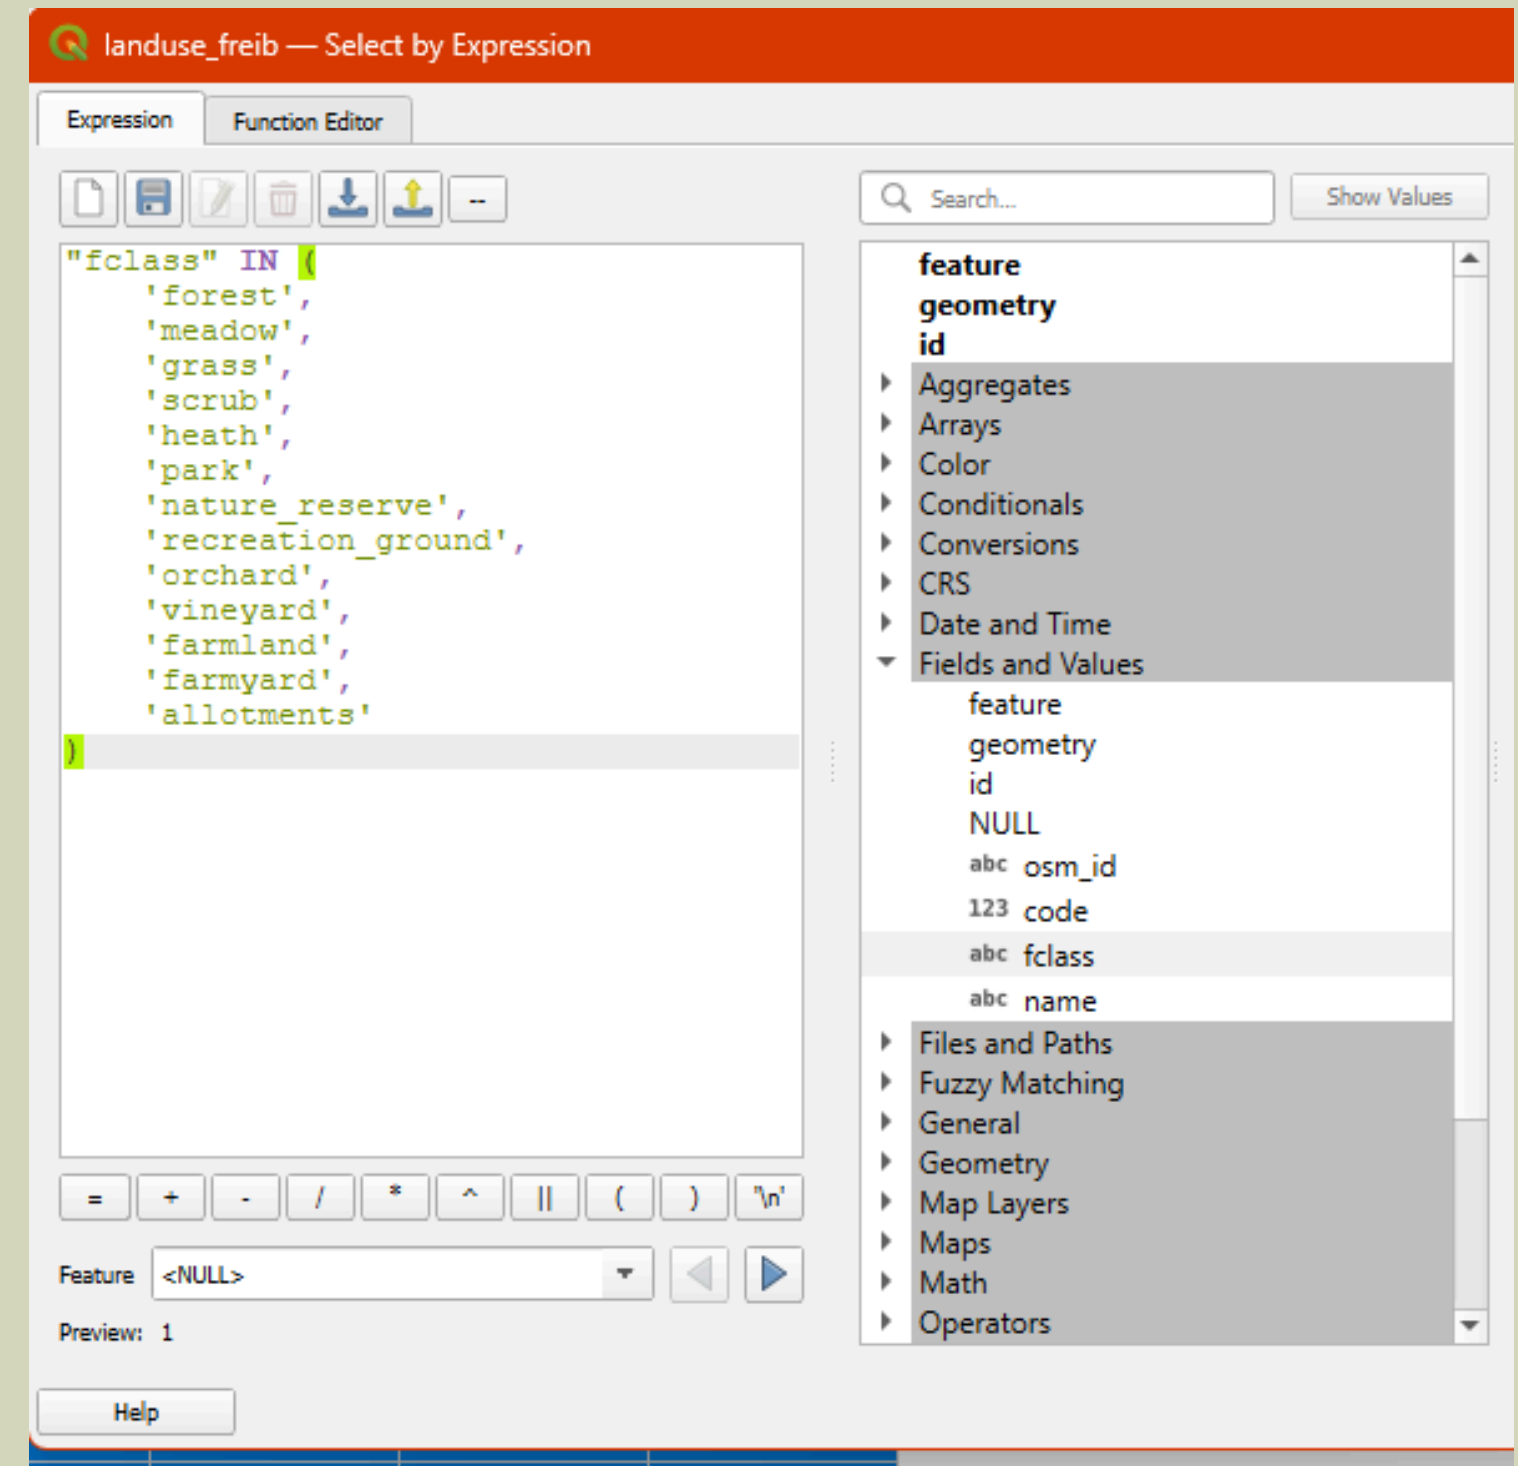

1) FILTER THE NATURAL LAND USE CLASSES

OPEN THE ATTRIBUTE TABLE → SELECT BY EXPRESSION:
EXPRESSION: "LANDUSE" IN (

'FOREST',
'MEADOW',
'GRASS',
'SCRUB',
'HEATH',
'PARK',
'NATURE_RESERVE',
'RECREATION_GROUND',
'ORCHARD',
'VINEYARD',
'FARMLAND',
'FARMYARD',
'ALLOTMENTS'

)

THIS KEEPS ONLY THE NATURAL/GREEN CATEGORIES.

Q3: Which neighborhoods have the highest amount of green and natural land us?

10

CONTINUE FOLLOWING THE PROCESS OF QUESTION 1:

2) INTERSERCT;

3) CALCULATE AREA

3) RUN "STATISTICS BY CATEGORIES"

4) INTERPRET THE RESULTS

SORT THE COLUMN SUM FROM LARGEST TO SMALLEST.

THE NEIGHBORHOODS AT THE TOP ARE THE ONES WITH:
THE HIGHEST AMOUNT OF GREEN AND NATURAL LAND USE.

Q4: Where are commercial and retail areas concentrated?

11

1) FILTER THE COMMERCIAL AND RETAIL CLASSES

OPEN ATTRIBUTE TABLE → SELECT BY EXPRESSION:
"FCLASS" IN ('COMMERCIAL' , 'RETAIL')

THIS WILL KEEP ONLY THE POLYGONS CLASSIFIED AS
COMMERCIAL OR RETAIL.

CONTINUE FOLLOWING THE PROCESS OF QUESTION 1 AND
2:

2) INTERSECT;

3) CALCULATE AREA

3) RUN "STATISTICS BY CATEGORIES"

4) INTERPRET THE RESULTS

SORT THE COLUMN SUM FROM LARGEST TO SMALLEST.
THE NEIGHBORHOODS WITH THE HIGHEST SUM VALUES ARE
THE ONES WHERE COMMERCIAL AND RETAIL LAND USES
ARE MOST CONCENTRATED.

Q5: Which neighborhoods have the highest land use diversity?

1) INTERSECT NEIGHBORHOODS WITH THE LAND USE LAYER (WITHOUT FILTER)

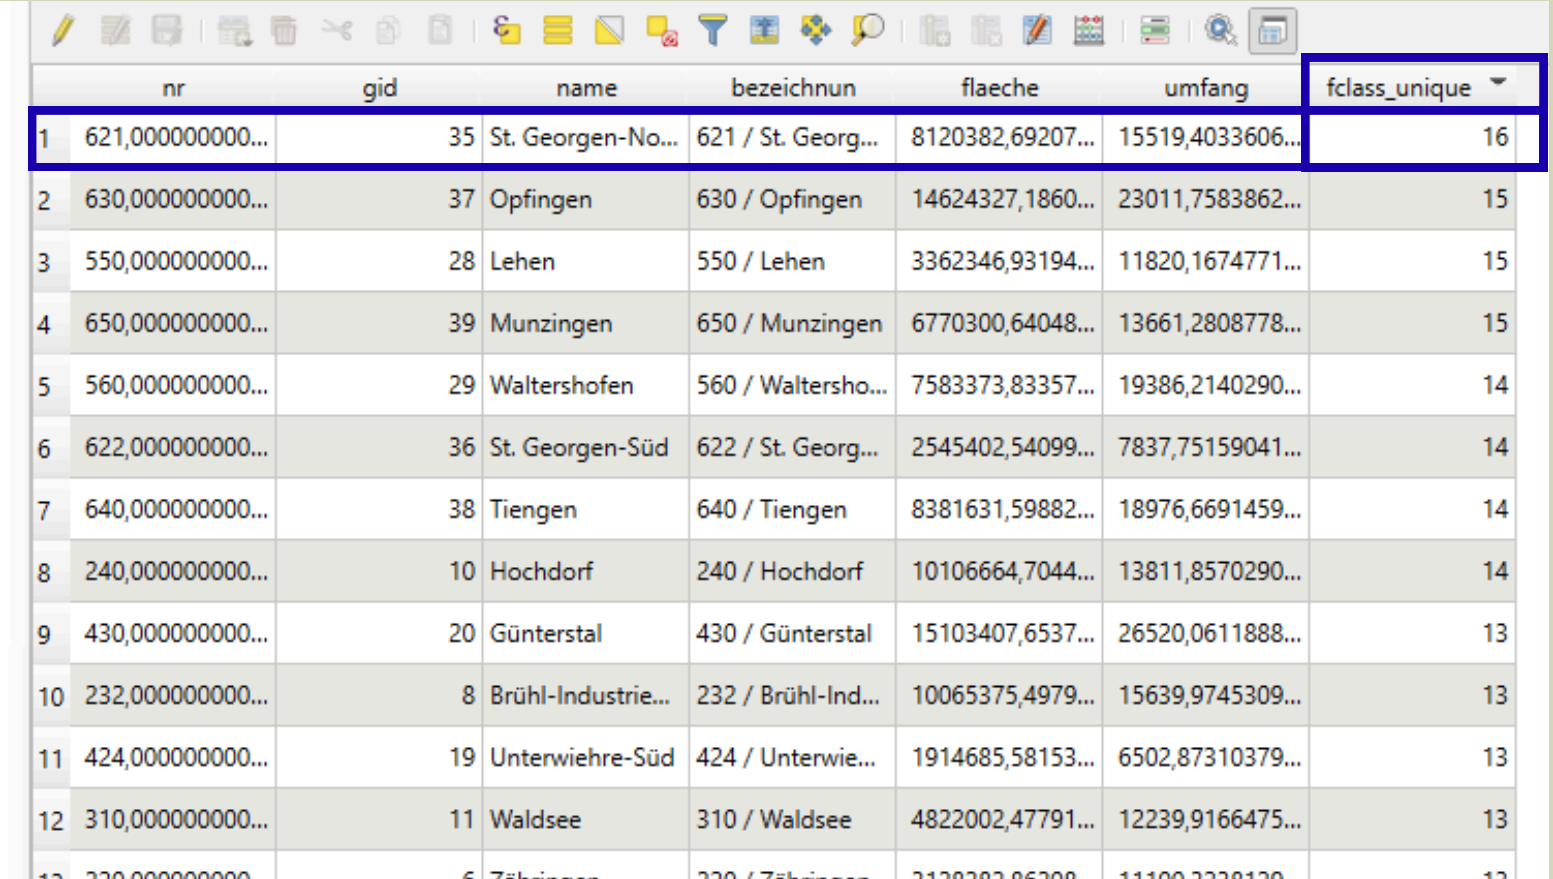

QGIS → VECTOR → GEOPROCESSING TOOLS → INTERSECTION

2) OPEN “JOIN ATTRIBUTES BY LOCATION (SUMMARY)”
VECTOR → DATA MANAGEMENT TOOLS → JOIN ATTRIBUTES BY LOCATION (SUMMARY)

- TARGET LAYER: NEIGHBORHOODS.
- JOIN LAYER: INTERSECTION LAYER.
- SPATIAL PREDICATE: SELECT INTERSECTS.
- FIELDS TO SUMMARISE: SELECT FCLASS.
- SUMMARIES TO CALCULATE: CHECK **UNIQUE**.

RUN THE TOOL TO CREATE A NEW NEIGHBORHOOD LAYER WITH A FIELD SHOWING THE NUMBER OF DISTINCT LAND-USE CLASSES PER NEIGHBORHOOD.

CHECK THIS FIELDS IN THE ATTRIBUTE TABLE.

Q6: Which neighborhoods have the highest number of parks and social green spaces?

1) INTERSECT NEIGHBORHOODS WITH THE LAND USE LAYER (WITHOUT FILTER)

QGIS → VECTOR → GEOPROCESSING TOOLS → INTERSECTION

2) FILTER "FCLASS" IN ('PARK', 'RECREATION_GROUND')

3) OPEN "JOIN ATTRIBUTES BY LOCATION (SUMMARY)"
VECTOR → DATA MANAGEMENT TOOLS → JOIN ATTRIBUTES BY LOCATION (SUMMARY)

- TARGET LAYER: NEIGHBORHOODS.
- JOIN LAYER: INTERSECTION LAYER.
- SPATIAL PREDICATE: SELECT INTERSECTS.
- FIELDS TO SUMMARISE: SELECT FCLASS.
- SUMMARIES TO CALCULATE: CHECK COUNT.

CHECK THIS FIELDS IN THE ATTRIBUTE TABLE.
